Quality of Aloe Green gel & juice as compared to Aloe vera products available in market

Processing
We are claimed to use only inner pure Aloe vera gel that is further processed under the devised technique. Processing is essential to remove anthraquinones which are toxic in higher concentration. Our Aloe vera products are substantially anthraquinones free. Aloe vera drinks found in expensive health food stores are un-processed and contain anthraquinones harmful for human health.

Chemicals
Our Aloe vera drinks are free of chemicals and thickening agents. Market Aloe vera products are just grinded gel fillet, watered down, chemicals plus and contain artificial thickening agents.

Packaging
Aloe vera gel and juice are properly sealed and packed in dark bottles which avoid light and oxygen. Light and oxygen destroy the beneficial properties of Aloe vera gel and juice. Aloe vera products available in market are packed in clear or translucent opaque bottles that are dangerous for use.

Punjab University contribution
Punjab University team under the project of Herbal Heritage Centre in the Institute of Agricultural Sciences (IAGS) has successfully devised a cost effective process for commercial production of clear and high quality Aloe vera gel and juice. The market demand of this commodity in Lahore is around 2000 kg per day which costs Rs. 950,000/-. Under this cost effective process local industry involved in various ventures requiring gel component would find a reliable ingredient at much cheaper rate. Aloe vera gel & juices are prepared and analyzed from PCSIR Laboratories Complex, Karachi and are being registered with the name of Aloe green.
